DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's amendment filed on 1/15/04 has been entered.

Claims 3, 4, 7, 8, 11, 12, 15, 16, 18, 20, 22, 24, 26, 28, 30, 32, 35, 36, 38, 40, 42, and 44 are pending in the application.

Claim Rejections - 35 USC § 102

2. Claims 3, 7, 11, 15, 18, 20, 22, 24, 26, 28, 30, 32, 35, 38, 40, 42, 44 are rejected under 35 U.S.C. 102(e) as being anticipated by US patent #5,636,336 (Adachi).

- As for claims 3, 7, 11, 15, 18, 22, 26, 30, 35, 38, 42: Adachi teaches a computer implemented display control system (fig 2) and corresponding method for data control during screen display operations, comprising the means/steps:
Pointing device 32 that indicates a position 68 on a screen of a display unit 24,
A graphic data processing means 22 having deleting means 52 that successively deletes first elements (i.e., picture elements) of data from a specified area 64 of the screen and rearranges second elements remaining in the specified area (i.e., remaining picture elements) to provide an appearance that the second elements of data are

Art Unit: 2173

gradually withdrawn from the specified area at the indicated position, the deleting means including a speed control unit that control the time interval to be successively shorter depending on the pressure applied to the pen during the deletion process (10:28-47). The second elements are rearranged in a spiral pattern (i.e., in a rotated pattern, 3:58-65; 7:9-11; 9:63 - 10:5).

- As for claims: 20, 24, 28, 32, 40, 44: Adachi teaches a computer implemented display control system (fig 2) and corresponding method for data control during screen display operations, comprising the means/steps:

Pointing device 32 that indicates a position 68 on a screen of a display unit 24, A graphic data processing means 22 having restoring means 56 that successively restores elements (i.e., picture elements) of data to a specified area 64 of the screen to provide an appearance that the elements of data are gradually reappears at the specified area at the indicated position, the restoring means including a speed control unit that control the time interval to be successively shorter depending on the pressure applied to the pen during the deletion process (10:28-47). The elements are restored in a spiral pattern (i.e., in a rotated pattern, 3:58-65; 7:9-11; 9:63 - 10:5).

Claim Rejections - 35 USC § 103

3. Claims 4, 8, 12, 16, 36 are rejected under 35 U.S.C. 103(a) as being unpatentable over US patent #5,636,336 (Adachi).

- As for claims 4, 8, 12, 16, 36: Adachi fails to clearly teach the displaying of an image indicating the completion of the deleting/restoring process. However Official notice

Art Unit: 2173

is taken that implementation of displaying an image indicating the completion of a process is well known. It would have been obvious to one of skill in the art, at the time the invention was made, to implement the displaying of an image indicating the completion of the deleting/restoring process to Adachi. Motivation of the implementation is for providing a visual feedback indicating the completion of the deleting/restoring process.
